

Prajapati Purvik

Embedded Systems Engineer

Automation & Robotics graduate currently pursuing B.Tech in Computer Science (AI/ML). Experienced in Embedded Systems, ESP32 development, IoT solutions, warehouse automation, and robotics projects. Passionate about robotics, AI, computer vision, and industrial automation with hands-on experience in hardware and software integration.

Education

2025 - 2028

B-Tech in CSE (AI / ML)

Bhagwan Mahaveer University

2022 - 2025

Diploma in Automation and Robotics

Gujarat Technological University

Language

- Hindi
- English
- Gujarati

Programming

- Python
- C
- C++
- Java Script
- HTML
- CSS
- MicroPython

Projects

Warehouse Automation Robots

Developed a distributed warehouse automation system using multiple ESP32 nodes communicating through micro-ROS with a centralized ROS2 server running on Ubuntu.

- It minimizes the required manpower and provides a live user interface on the local Web host.
- Uses Multiple ESP32 connected over 1 Ubuntu server.

Smart esp32 Display

A smart ESP32-powered adjustable display that provides you

- An android app support that provides the user interface
- A flexible multi-display control using single controller, supports up to 8 TFT displays.
- Media view mode that supports gif, photos, and pdf
- Adjustable clock and view mode for each connected display module

Hand Gesture Controlled Mouse

Control your Windows PC mouse entirely with hand gestures captured from your webcam using the following functions

- detecting the hand and gestures of the fingers
- detecting the motion of the hand
- perform the functions that are done using an ordinary mouse, like clicking , drag , drop, select

Experience

FOG Technologies

Feb 2026 - Current

Embedded engineer

- Assemble and test esp32 powered systems
- Develop and modify the firmware according to the needs
- Research and develop the current system to improve the performance and reliability
- Provide technical support to the clients over call

Energy Cloud and Technologies

June - August 2024

Embedded systems intern

- Design PCBs using Kicad software
- Develop firmware to integrate sensors using Arduino IDE
- Communicate multiple devices using websockets

Softwares and Tools

- Arduino IDE
- OpenCV
- Esp IDF
- Git & Github
- Kicad
- VS Code
- ROS2 Humble Basics
- Android Studios
- Websockets and localhost
- Blynik IOT
- ESP-Now
